# Do Now 2.01

## Open up the console

**Type the following code**

```
x_stage1 = 123
y_stage1 = 456

x_stage2 = str(x_stage1)
y_stage2 = str(y_stage1)

print(x_stage2 + y_stage2)
```

## In your Notebook

**Answer the following**

1. What type are the variables **x_stage1** and **y_stage1**?
2. What type are the variables **x_stage2** and **y_stage2**?
3. How would you convert a string, **'100'** to an integer?
