Lab 7.02 - Pet Class In this lab, we will create a Pet class that will keep track of the type of animal, color, food, noise and name of a given animal. ## Create a class called Pet that has the following attributes * Animal (e.g., dog, cat, fish) * Color (e.g., spotted, tabby, gold) * Food (e.g., kibbles, tuna, fish flakes) * Noise (e.g., meow, woof, splash) * Name (e.g., Scooby Doo, Fluffy, Bubbles) ## Specifications 1. Make sure to use the `__init__` method to create these attributes. 2. Create a list of pets. 3. Create a function that takes in a list of pets and prints out the name and the food attributes. 4. Test your function with your list of pets.
